1. TestJava

This chapter presents an overview of the project measures. This dashboard shows the most important measures related to project quality, and it provides a good starting point for identifying problems in source code.

1.1. Report Overview

Project Code Review Status

Coding Rules Violations

Violations		
52	 Blocker	0
	 Critical	1
	 Major	42
	 Minor	9
	 Info	0

Defect Analysis

Static Analysis

Lines of code 108 127 lines 70 statements 4 files	Classes 6 2 directories 6 methods	
Comments(%) 0.0 0 lines	Duplications(%) 39.4 50 lines 2 blocks 2 files	Technical Debt 9 hour 55 Minutes Time required to fix the issues

Code Compliance Formula

$\%Compliance = 100 - (weighted_violations / Lines\ of\ code * 100)$
 weighted_violations is the sum of the violations weighted (whereas the default values for blocker - 10, critical - 5, Major - 3, minor - 1, info - 0) by the coefficient associated to each priority.

Take the example of any project.

Blocker 8
 Critical 28
 Major 361
 Minor 1,012
 Info 2,761

$weighted_violations = (8*10+28*5+361*3+1012*1+2761*0) = 2315$
 LOC= 15879

$\%Compliance = 100 - (2315/15879 * 100) = 85.4$
